

Getting PredictableSM Best Practice Assessment

Gets Your Team Thinking, Acting, and Delivering More Predictably

Does your IT team struggle to deliver on expectations?

Are your resources in the wrong roles?

Do you get frequent change requests at all stages of development?

Do you have clear visibility on when your projects will be complete?

Does your IT team have low credibility with the business?

Predictability is influenced by your process, people, metrics and IT environment (hardware and software). Geneca's Getting Predictable Best Practice AssessmentSM helps identify potential predictability gaps in your current IT organization and makes recommendations on how to address them.

This service lays the foundation for your IT organization to be a predictable, no-surprise team operation that is perceived as flexible, responsive, and an asset to the business. We believe that any IT department can adapt our Getting PredictableSM best practices to their own culture, improving their odds of getting the results they need from their software development efforts.

Geneca's assessment helps improve your current approach to running projects internally and identifies ways to transform your team into a more aligned, no-surprise team operation.

■ **Getting PredictableSM Best Practice Assessment**
