

Microsoft Team Foundation Server JumpStart Service

Get Ready to Use TFS On Your Next Project

Do you need to deliver software more predictably?

Do code performance issues interfere with your ability to deliver software on time?

Do you find it difficult to define a common vision of success?

Do you need to catch coding problems earlier and make sure they never come back?

Delivering software predictably takes the right process, people, and tools – as well as common success criteria. Because distributed development environments are much more common in today's Internet world, you need to proactively create a collaborative team environment capable of achieving a common vision of success.

Team Foundation Server, one of the most useful features in Visual Studio 2008, supports this level of team collaboration.

making software development predictable

Geneca's 2-Week approach to TFS positions your team to successfully leverage this productivity environment on your next project.

■ **Team Foundation Server JumpStart benefits:**

- Drive common success criteria and create a collaborative environment across the entire team – including the business team, project managers, business analysts, architects and developers
- Create “traceability for business objectives down to coding and testing”
- Support automated builds and testing, driving business requirement compliance throughout development
- Increase team productivity and quality of the code. Learn how TFS supports Geneca's Getting PredictableSM approach to software development

■ **Deliverables:**

- Analysis of your team's development environment
- Installation of TFS and supporting software
- Team review of project management, development, QA and best practices using TFS
- Team readiness to use the TFS on your next project

■ **Specifics:**

- Length of Service: 2 to 3 weeks
